Ejercicio Nº1

Para los elementos del siguiente sistema, obtener:

- a) Diagrama de esfuerzo normal
- b) Diagrama de Tensión Axial

Paso 1: Calculo de las Normales

a) Sección r-r

$$N_{12} = -10$$

$$N_{12} = -10$$

b) Sección s-s

$$N_{23}\!\coloneqq\!-10-10-10$$

$$N_{23} = -30$$

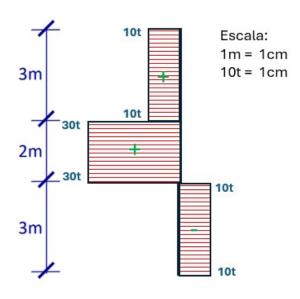

c) Sección c-c

$$N_{34}\!\coloneqq\!-10-10-10+20+20$$

$$N_{34} = 10$$

Auxiliar: Jimmy Alejandro Nina Cari

Paso 2: Diagramar las normales

Paso 3: Calcular las tensiones

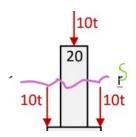

$$T = \frac{N}{A}$$

T : tensión A : Área N : Normal

a) Tensión en la sección r-r

$$T_{12} \coloneqq \frac{N_{12} \cdot 1000}{\frac{\pi \cdot (20)^2}{4}}$$

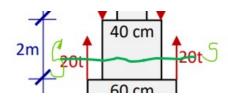

$$T_{12} = -31.831$$

b) Tensión en la sección s-s

$$T_{23} \coloneqq \frac{N_{23} \cdot 1000}{\frac{\pi \cdot (40)^2}{4}}$$

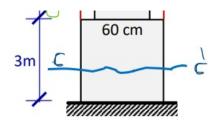

$$T_{23} = -23.873$$

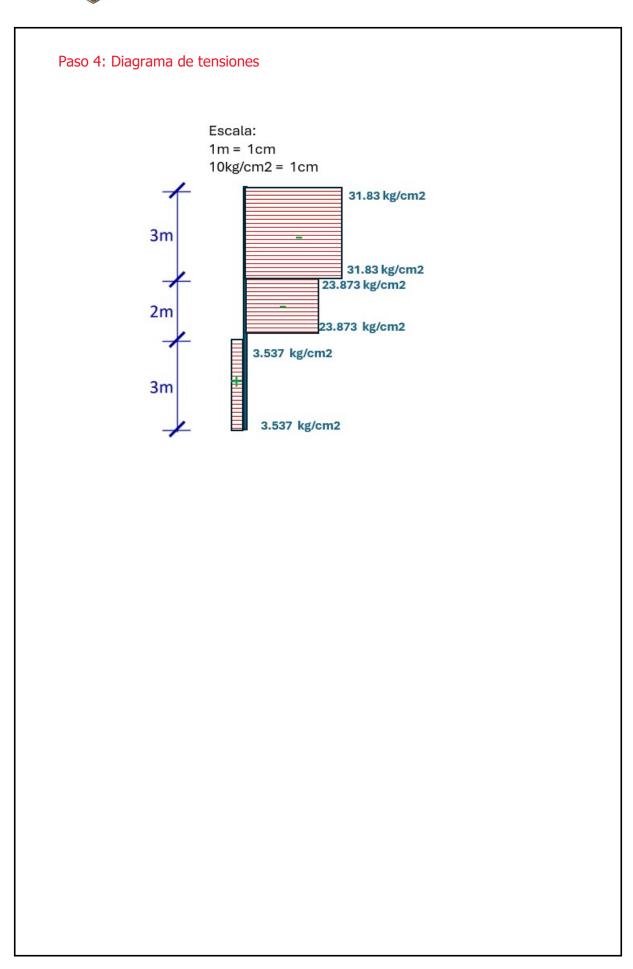

c) Tensión en la sección c-c

$$T_{34} \coloneqq \frac{N_{34} \cdot 1000}{\frac{\pi \cdot (60)^2}{4}}$$

$$T_{34} \! = \! 3.537$$
